Shademasters® Shadeports

COMPANY OVERVIEW

Shademasters®Shadeports is a leading provider of high-quality shadeports for a variety of applications. Our products are designed to offer superior protection against the sun's harmful UV rays, as well as other environmental factors such as wind, rain, and hail. We work with a range of clients, including architects, property developers, and private individuals, to provide custom-designed shade solutions that meet their specific needs

At Shademasters®Shadeports we understand the importance of providing a reliable and effective shade solution. That's why we use only the highest-quality materials and work with experienced, skilled professionals to ensure that every shadeport we install is built robustly. Our shadeports are designed to be both durable and stylish, making them an ideal choice for a wide range of applications.

SHADEPORT STRUCTURES

■ 4 Pole Stand-Alone Structure

Shademasters® Shadeports - This shadeport structure is supported by four poles, making it a sturdy and reliable option for covering larger areas. The 4 pole stand-alone structure is often used in commercial applications such as car dealerships, shopping centers, and commercial. The size of the structure can vary depending on the specific requirements of the client.

***AVAILABLE VARIOUS SIZES & COLOURS**

Shademasters® Shadeports

4 Pole Stand-Alone Structure

4 Pole Stand-Alone

A durable & versatile shade structure supported by four independent poles - designed to provide reliable protection from the sun and weather. Ideal for parking areas, schools, walkways, commercial spaces, and recreational facilities - this stand-alone design offers excellent stability, a clean modern appearance & flexible installation without requiring attachment to existing buildings. Perfect for creating comfortable, protected outdoor spaces while enhancing the overall look of the property.

SHADEPORT STRUCTURES

■ Back to Back Cantilever Structure

Shademasters® Shadeports- The back to back cantilever structure is a variation of the 2 pole cantilever structure that is designed to cover two adjacent parking spaces. This structure is supported by two poles in the center, with two cantilever arms extending out on either side to cover each parking space.

***AVAILABLE VARIOUS SIZES & COLOURS**

Back to Back Cantilever Structure

Back to Back Cantilever

A high-capacity shade solution featuring two cantilever sections connected back-to-back, providing extensive coverage with minimal pole intrusion. This design creates a spacious, unobstructed area beneath the structure, making it ideal for parking lots, commercial developments, schools & public spaces. Offering a modern appearance, efficient use of space & reliable protection from the sun and weather, it is a practical & visually appealing choice for larger outdoor areas.

Shademasters® Shadeports

LARGE SCALE DEVELOPMENTS GAUTRAIN PROJECT

With Shademasters® Shadeports - The project involved the removal and replacement of aging shade netting systems, restoring the structures to optimal condition while improving durability, appearance, and protection against harsh environmental conditions.

Through expert workmanship, strict quality control, and efficient project management, Shademasters® delivered a reliable, cost-effective solution that maximized the lifespan of existing infrastructure and minimized disruption to Gautrain operations.

This project further demonstrates Shademasters®' capability to successfully manage and execute large-scale commercial and public-sector shade structure refurbishment projects throughout Gauteng.

TECHNICAL SPECIFICATION

■ **Frame Material**

At Shademasters@Shadeports - The frame of a shadeport is typically made from steel or aluminum, with the latter being the more lightweight and corrosion-resistant option. The thickness of the frame is usually measured in millimeters (mm) and will depend on the size of the shadeport.

■ **Fabric Material**

Shademasters@Shadeports are covered with a durable and weather-resistant fabric (On request only at an additional cost.) The most common types of fabric used for shadeports are HDPE (high-density polyethylene) and PVC-coated polyester. The thickness of the fabric is typically measured in grams per square meter (GSM).

■ **UV Protection**

At Shademasters@Shadeports - The primary purpose of a shadeport is to protect people and property from the sun's harmful UV rays. The level of UV protection provided by a shadeport is measured in UPF (ultraviolet protection factor), with higher UPF ratings indicating greater protection.

■ **Installation Method**

Shademasters@Shadeports can be installed using a variety of methods, including bolted, anchored, or suspended. The installation method will depend on the size and location of the shadeport, as well as the specific requirements of the client. Shademasters@Shadeports must be able to withstand strong winds without collapsing or causing damage. The wind resistance of a shadeport is typically measured for extreme conditions.

■ **Size & Design**

Shademasters@Shadeports come in a variety of sizes, ranging from small residential units to large commercial installations. The size of a shadeport is typically measured in square meters (m²). Shademasters@Shadeports can be designed in a variety of shapes and configurations to meet the specific needs of the client. Some common designs include cantilever, post-supported, and sail-shaped structures.
